First published in 1990, this is a compilation of several important papers that have contributed to the foundation of population genetics, evolutionary biology and human genetics. The collection includes Haldane's first paper in genetics, which was published in 1915, reporting the first case of linkage in a mammal, and - fifty years later, in 1965 - his last paper in genetics on selection for a single pair of allelomorphs with complete replacement. Haldane's Rule, the only idea named after him, was published in 1922 and is still valid today. Other papers, which include many Haldane firsts, such as the first estimation of a human mutation rate, first human gene map, first papers in population genetics, first estimate of the probability of fixation of a new mutation, and first measurement of mutation impact on a

population, leading to the "genetic load" concept, are included. The volume also includes a paper presenting an ancient logical system for interpreting scientific results. "Report of the Dominion fishery commission on the fisheries of the province of Ontario, 1893", issued as vol. 26, no. 7, supplement. "Report of the Dominion fishery commission on the fisheries of the province of Ontario, 1893", issued as vol. 26, no. 7, supplement. At the beginning of the twentieth century, industrialization both dramatically altered everyday experiences and shaped debates about the effects of immigration, empire, and urbanization. In American Abyss, Daniel E. Bender examines an array of sources—eugenics theories, scientific studies of climate, socialist theory, and even popular novels about cavemen—to show how intellectuals and activists came to understand industrialization in racial and gendered terms as the product of evolution and as the highest expression of civilization. Their discussions, he notes, are echoed today by the use of such terms as the "developed" and "developing" worlds. American industry was contrasted with the supposed savagery and primitivism discovered in tropical colonies, but observers who made those claims worried that industrialization, by encouraging immigration, child and women's labor, and large families, was reversing natural selection. Factories appeared to favor the most unfit. There was a disturbing tendency for such expressions of fear to favor eugenicist "remedies." Bender

delves deeply into the culture and politics of the age of industry. Linking urban slum tourism and imperial science with immigrant better-baby contests and hoboes, American Abyss uncovers the complex interactions of turn-of-the-century ideas about race, class, gender, and ethnicity. Moreover, at a time when immigration again lies at the center of American economy and society, this book offers an alarming and pointed historical perspective on contemporary fears of immigrant laborers.
